ISAAC ONAH

Mobile & Frontend Engineer

Malta | +356 99486016 | isaaconah6@gmail.com | https://isaac-onah.github.io/

SUMMARY

Mobile and frontend engineer with five years of experience building iOS, Android, and web apps in Flutter, native Android/iOS, Angular, and React. Writing functional specifications and running user acceptance testing (UAT). Shipped products in utilities, transport, tourism, accounting, and student life, from smart-meter field tools and electricity vending to booking platforms and fleet apps. Based in Malta and looking for a role owning mobile and web products end to end.

SKILLS

Mobile: Flutter, Dart, Kotlin, Java, Swift, BLE, Jetpack Compose, SwiftUI, Clean Architecture, BLoC, GetX, Provider, RxDart

Web: Angular, React, TypeScript, RxJS, Angular Signals, NgRx, Redux, Tailwind

Backend / integrations: REST, Stripe, Socket.IO, Firebase, Google Maps, Hive, SQLite

Practices: Git, CI, unit/integration tests, code review, Play Store / App Store releases

Technical support: SQL, T-SQL, Microsoft Server Reporting Services, Active Directory, DHCP, DNS, Microsoft Dynamics 365

EXPERIENCE

Mobile/Frontend Engineer | Jett Labs, Malta

November 2024 – September 2026

Designed and shipped production Flutter (iOS/Android) and Angular apps for tourism, transport, accounting, and student clients, including state management, API integration, and store releases.

- Built Localway, a Sicily experiences marketplace, as a three-app suite: Flutter traveller app, Angular public storefront, and Angular host/admin portal (CMS, booking calendar, Stripe checkout, host–guest chat, reviews, EN/IT localisation).
- Developed Transport Plus Driver, a multi-tenant fleet app (BLoC + Clean Architecture) for taxi, airport transfer, and shuttle trips, including trip lifecycle, background GPS, Firebase push, roster/vehicle assignment, and cash reconciliation.
- Built Azora, a multi-tenant Malta accounting client: OTP/MFA login, multi-company switching, offline document capture with Hive sync, Socket.IO updates for AI-processed invoices, VAT/tax-return workflows, and in-app WebView payments.
- Implemented shared product patterns across apps: REST APIs, Socket.IO realtime, Google Maps, Stripe-hosted checkout / Connect payouts, role-based dashboards, and dark/light theming.
- Built FreeHour, the Angular student web app for Malta institutions: swipeable timetables, Who's Free matching against friends' calendars, lecture/task/exam events and countdowns, Google Calendar sync, friend/discover flows, and student offers and jobs.

Software Developer | Enugu Electricity Distribution Company, Nigeria

June 2020 – August 2024

Developed mobile and web applications using native Android/iOS, Flutter, React, and Angular. Started in UI/UX (Figma), then moved into engineering.

- Designed field and consumer app screens in Figma (user flows, high-fidelity UI) before transitioning fully into development, then implemented those designs in Flutter and native Android.
- Built a specialised field application using Flutter and Java that uses Bluetooth Low Energy to interface with Bluetooth dongles for real-time smart-meter data acquisition.
- Developed a consumer-facing Flutter app with secure payment gateways and REST APIs for electricity token vending, transaction history, and in-app complaint ticketing.
- Built a React web app with a Telegram bot so staff can run operational workflows from web and Telegram (alerts, requests, status updates, transaction summaries) without the consumer app.
- Developed a Java Android cash-collection app for onsite cashiers to vend electricity tokens in person, aligned with the vending/payment APIs, and supported the cash-collection backend during downtime.

PROJECTS

Transport Plus | Flutter · Mobile · 2026
Multi-tenant fleet Driver client for coaches, airport transfers, and shuttles in Malta. Trip lifecycle, background GPS, Firebase push, roster, and cash reconciliation. Flutter, BLoC, Clean Architecture, GetIt, REST, SQLite, secure storage, Firebase.
https://play.google.com/store/apps/details?id=io.transportplus.driver

Localway | Flutter + Angular · 2026
Sicily experiences marketplace: Flutter traveller app, Angular public storefront, and Angular host/admin CMS. Bookings, Stripe Checkout/Connect, host–guest chat, maps, EN/IT localisation. Flutter, BLoC, Angular, TypeScript, REST, Socket.IO, Google Maps, Stripe.
https://local-way.com/

Azora | Flutter · Mobile · 2025
Flutter client for a Malta accounting SaaS. OTP/MFA, multi-company switching, offline document capture, realtime AI invoice updates, VAT returns, and in-app payments. Flutter, BLoC, Dio, Hive, Socket.IO, WebView, secure storage.
https://play.google.com/store/apps/details?id=mt.azora.app

FreeHour | Angular · Web · 2024
Web app for Malta students: swipeable timetables, Who's Free matching, academic countdowns, Google Calendar sync, friends/discover, offers and jobs. Angular, TypeScript, RxJS, REST, Firebase.
